**CaminoSoft Selects Pegasus for Archive Engine in
Information Lifecycle Management Solution**

San Ramon, Calif., Dec. 10, 2003 – Pegasus Disk Technologies announced today that InveStore[®] archive management software has been selected as the archive engine for CaminoSoft's Information Lifecycle Management solution. Pegasus InveStore makes compliance easy and affordable. InveStore creates a virtualized data pool that expands secondary storage onto any number of archive devices while simplifying management of those resources.

CaminoSoft's Managed Server HSM[™] software provides an information lifecycle management model that is a cost-effective solution for managing the complexities of data storage management. By combining Managed Server HSM with InveStore, the result is a finely tuned data storage resource that enables virtually infinite storage growth, while meeting strictly regulated compliance requirements and increased data availability with a minimal amount of effort and expense. As storage requirements increase or change, additional storage devices can be simply added to the pool.

Richard Krueger, Vice President of Channel Sales and Marketing at CaminoSoft, stated, "We are very pleased to establish this important business relationship with Pegasus. Their comprehensive InveStore media management portfolio provides IT professionals with access to a broad and versatile range of archival storage alternatives, including M-O, CD-R, DVD-RAM/ROM, and planned tape peripherals. Pegasus' support of WORM devices and media is especially important due to the established and emerging regulatory procedures that govern data retention in several industries, most notably banking, finance, and healthcare."

Krueger continued, "The seamless integration of Pegasus' modular InveStore software and CaminoSoft's Information Lifecycle Management solution results in scalable, affordable offerings for NetWare & Windows 2000 environments that satisfy channel partner product requests and address end-user customer compliance needs."

"We are excited to launch this business relationship with CaminoSoft. The combination of CaminoSoft's innovative Information Lifecycle Management solutions for NetWare & Windows 2000 and Pegasus' InveStore media management creates a solution with outstanding value while enabling them to fulfill and support customers' diverse storage management, high availability and regulatory needs," said Roy Slicker, President and CEO, Pegasus Disk Technologies. "There has been a driving interest in compliance storage with the need to direct data to storage devices relevant to the point in time within its lifecycle. Pegasus helps to meet those needs for write-once compliance, while CaminoSoft provides a robust migration engine."

About CaminoSoft

CaminoSoft Corporation is a developer and manufacturer of software solutions designed to store, manage, and safeguard vast quantities of data created in a wide range of business applications, organizational settings, and vertical markets. The Company offers Information Lifecycle Management solutions for Novell NetWare and Microsoft Windows 2000 server-based networks. Its Storage Management and High Availability solutions are available worldwide through commercial distributors, value-added resellers, and systems integrators.
